

QLaser Solutions - May 2009

April "Referralmania" Winner

Roberta Roth of Eugene, OR edged out **Joanne Johnson** of Aspen, CO to win April's **Referralmania** contest. You can read both of their testimonials in this newsletter. Both received free copies of Dr. Lytle's books *Universal Healer*, *Osteoarthritis* and *Energy Transcendence*. And for being the #1 winner, Roberta Roth receives a \$25 QLaser Solutions gift certificate!

Laser Training with Dr. Larry Lytle

Note: the opinions and ideas presented in the "Laser Training with Dr. Larry Lytle" section of this newsletter are those of Dr. Lytle only. No medical treatment claims are made or implied by the manufacturer of this laser equipment, Business Wizards, Inc., QLaser Solutions, nor any distributor associated with this equipment. This equipment is sold and intended for veterinary use.

I'm most interested in the cold laser for nerve paresthesia, anaesthesia after implant surgery in the mandible. I have just a few cases a year that are bothered by it. Hence, I'm looking for new tech. to treat that mandibular nerve.

I think the best testimony for nerve regeneration is the Little Bear Video. Bears can't lie - they either get better or they don't. The video is proof of the QLasers effectiveness for nerve regeneration.

I got tinnitus from a concert 5 years ago and its gotten worse through out the years. I have read that lasers may be the best with this type of tinnitus. Using the bite tabs, this would help even with my condition? Secondly, I have a friend that owns the laser and said I should try hers. I did like your booklet said and I experienced a heightening in ringing, is this a good sign as I know many health issues get worse before they get better?

It may not work to borrow a friends laser because tinnitus usually takes several months to heal and depends allot on how faithful you are at wearing and keeping the MBTs adjusted.

My wife has suffered from an Ischemic Stroke in 2004 and presently has Hemiplegia (Right Side Paralysis) and Aphasia (Amnesic & Global with Inability to Communicate). She appears to understand our talk and nods a "yes" or "no" to questions. She can repeat words but does not know their meanings. She cannot connect an object with its word. She cannot write with her good left hand, though we keep on trying. She watches the TV and APPEARS to understand it. When having pain or being annoyed, she can shout. Please inform, if laser treatment could help.

I am sorry to learn that your wife suffered a stroke. The Q1000 works at the cell level and is beneficial for restoring the cells in the brain damaged from a

stroke. Use according to the Low Level Laser User's Manual. When ever anyone suffers from a stroke, there will be extra-cellular bleeding. The laser will not clean up this debris. It is MANDATORY that she use 3 Regal Enzymes between meals three times a day (total 9 tablets daily) until a bottle of 180 tablets are gone. To heal the brain there must be good blood flow to the brain. Blood flow to the brain is restricted by tight "dental muscles" in the jaw and neck which must be released in order to re-gain good circulation. To accomplish this your wife must wear Miracle Bite Tabs or an acceptable alternative. Be patient - re-growing new nerve and brain cells with the QLaser System may take as long as a year. I trust that this will help and your wife will recover.

My husband suffered a stroke ... just when does q1000 play any part...and where?

I am sorry to hear about your husband's stroke which has affected his vision and speech. A cautionary note - I realize that the medical establishment diagnoses this type of incident as strokes, but remember he consensus of medicine has never been right. New thinking is that the damage to the vision and speech centers is due to arteriole or artery leakage - quite a different thing than artery blockage due to plaque. This has happened to two of my employees - one whose vision was affected and the local docs put her on coumadin which nearly killed her because it thinned the blood and created more leakage. She went to Mayo and they took her off coumadin and she is recovering nicely. The other a 27 year old lost his voice which the docs said was a stroke due to a clot - fortunately he did not take coumadin and also is doing well. The proposed mechanism is as follows: the only difference between an artery and a vein is a smooth muscle layer in the artery. The inside of an artery and the inside of a vein are exactly the same tissue however so called plaque will not stick to the inside of a vein therefore the 50 year old cholesterol theory is being replaced. These muscle layers tighten or constrict due to long chain polypeptides, macromolecules or in lay language indigestible foods which shows up on an MRI as a clogged artery. Extra pressure is put on the vessels of the brain when the head of the condyle is shoved up and

back due to the loss of height of the back teeth which in turn puts pressure on the venous return from the brain. When this venous return is constricted more pressure is put on the muscle layers of the arteries and they tear. These miniature tears in the muscle layer of the arteries then break through the inside layer called intima. This tear creates a natural clotting mechanism which will show up on an MRI and is misdiagnosed as plaque and a stroke. Heart specialists that keep up are calling this inflammatory heart disease and viable plaque which is really a moving clot. A suggested treatment is: (1) Place Miracle Bite Tabs or Easy Adjust Proprioceptive Guides to allow the condyle to come down and forward to relieve pressure on the venous drainage and by the way - also reduces pressure on the Auditory Nerve and blood flow to and from the ear which will affect hearing. (2) When ever there is extra cellular leakage there is a dumping of protein debris which needs cleaned up. The best way to clean this up is with enzymes – the best enzyme I have found was Inflamm-Away – now sold as Regalzyme. Take 3 tablets three times a day between meals on an empty stomach. (3) Apply mode 2 of the Q1000 for one cycle per day on the side where the cerebrovascular incident occurred for one week – then apply every other day until improvement – then apply two times a week and finally once weekly. (4) Fear is a big issue on cerebrovascular incidents - the best way to control fear is via education and practicing the breathing rhythms in chapter 10 of Energy Transcendence.

Dear Larry, There's an arthritis epidemic in America; 1 in 5 people suffer from this painful disease.

The best way to help the millions of arthritis sufferers is to educate them about the QLasers System which just received over the counter clearance from the FDA for treating the symptoms of osteoarthritis. The QLasers System is very safe and has zero side effects plus it is simple and easy to use at home for osteoarthritis sufferers. Our placebo controlled research demonstrated 69 – 85% success in eliminating the pain and other symptoms of osteoarthritis plus 85% increase in mobility. In many cases the pain had not returned 42 days later which was the end of the study. **I would be happy to write an article for your publication (or any publication) or to give an interview to verbally tell your members and supporters about the latest way to treat osteoarthritis.**

Dealing With A “Healing Crisis”

Sometimes a laser user reports that their pain or the

condition that they are treating gets worse immediately after using the laser. This is very unusual especially if you have used the QLasers System according to the instructions in your *Laser User's Manual*, but it can happen. Here is what you can do.

First check and make sure you are correctly following all of the instructions in your *Laser User's Manual*. If you have followed all instructions and still find that your pain or condition gets worse right after using the QLasers System, this could be a result of:

1. Photosensitivity
2. Delivering too much energy too rapidly
3. You may be dehydrated

Very few people are truly photo or light sensitive and if you are one of these people, you probably already know it. Even if you are photosensitive you should be able to use the Q1000 directly over the area that you want to treat, but instead of using it as directed in the manual, use it for just a few seconds and increase the time as your body becomes more tolerant to the light. You can also apply the Q1000 to the kidney meridian as described later.

If you have been chronically ill for a long time and inactive your body becomes full of toxins and when the laser is applied it restores cellular function and increases circulation at the site. When cell function is increased the cells dump more toxins which must be collected by the lymph system. If you are inactive and the lymph system is sluggish and not doing its job and the toxins are not being carried away from the lasered site, this can cause swelling and pain. **This does not mean the laser is harming you. It means it is working too well!**

To avoid this type of problem, apply the QLasers System to increase lymphatic drainage as directed under lymphatic drainage in your *Laser User's Manual*. Also reduce the length of time and how often you are applying the laser directly over the site. Another option is to apply the QLasers System to the meridian system.

The cells of the body are constantly losing electrons which change the DNA to produce more of the same unhealthy cells. To become healthy the electrons must be replenished.

New research has documented that electrons can be taken in through kidney accupoint KI-1 (KI-1 is located on the bottom of the foot next to the ball of the big toe and in line with the second toe) by “grounding.”

Grounding or “earthing” is accomplished by walking barefoot on damp earth or grass or in the case of this research, pads were attached to KI-1 and then to a stake driven into the ground.

This placebo controlled study demonstrated 100% of the time that electrons entered the body through

KI-1 and reduced inflammation. (For a complete report on this study see *Subtle Energies & Energy Medicine*, vol 18, #3)

Since most people cannot walk barefoot on the earth on a regular basis, and since the Q1000 delivers electrons back to the body, it makes good sense to accomplish “grounding” by applying mode 3 of the Q1000 as shown at right.

This makes even more sense for those that suffer from some inflammatory condition and if the application of the QLaser System causes a “healing crisis.”

Remember inflammation accompanies every disorder of the body and when inflammation is controlled the cells of the body will be healthier.

Another thing to consider when application of the QLaser System causes a “healing crisis” is dehydration. In every sick person and every illness there is some level of dehydration. All health practitioners want to force you to drink water - which is good, but why not drink water that has beneficial frequencies put into it before drinking it.

Researchers have known for generations that water has memory. This is made very clear in the movie “What the Bleep Do We Know”, which features a section on Dr. Masaru Emoto and his “Messages from Water” and “The Hidden Messages in Water.”

Dr. Emoto has proven that thoughts, feelings and focused intentions through written and spoken words and music can change our water. The soliton wave in the QLaser System carries its beneficial messages on water.

The new break through in treating water is to use the Q1000 laser to apply frequencies to water. It is simple. Just apply Mode Three of the Q1000 laser to your glass bottle of reverse osmosis water for one cycle.

The proprietary frequencies of Mode Three are now stored in the water and will be released to benefit the cells of the body when the water is consumed. If you wish, it is possible to personalize your frequencies and have them placed in your Q1000 by using the steps outlined in my book *Innate Wisdom*, a workbook to help you select your own beneficial frequencies.

I have a theory that by applying two Q1000 lasers with complimentary frequencies opposite one another to a 5 gallon glass bottle of purified water; the amplitude is increased creating a soliton wave with a vortex of energy that is even more beneficial to the body.

This theory is based on the fact that three underground streams of water come together at Lourdes,

France and create an undisputable healing energy that is not available from the individual streams. Some conventional or western medicine thinkers may pooh-pooh this type of theory, but I remind the reader that much of physics is just theory including Einstein’s theory of General Relativity.

The implications of treating water with frequencies from multiple diode lasers that can produce a soliton wave (a single diode laser regardless of the wavelength cannot produce soliton waves) create a new awareness of how we can positively impact the earth and our personal health.

To get the best benefit from your lasered water, drink at least four glasses of room temperature lasered water every morning at least 45 minutes before eating. Throughout the day drink at least four more glasses between meals. Drinking water or any liquid with meals dilutes your digestive juices and slows digestion.

If you are one of those people who has found the QLaser System is not working as well as you had planned, try the above suggestions. And certainly call your Distributor for additional support anytime it is needed.

New Testimonials

A friend of mine who frequents our local senior citizen lunch program came in one day after a week of missing lunch. I asked him if he was OK because we hadn’t seen him in a week. He responded that he had been miserable with pain in his lower abdomen. He said, “I was doubled over with the pain and there was blood in my urine.” It frightened him enough to send him to see his doctor. An MRI showed some large **kidney stones**. The doctor informed him that they were too large for Ultrasound treatment and immediate surgery was crucial. The doctor mentioned that laser therapy was available in the next town (45 miles away) to the tune of \$15,000. My friend is a retired, disabled vet and unemployed. He replied that there was no way he could afford either surgery or the hospital’s laser treatment. I suggested trying my Q Laser. Using the 808 enhancer, I treated the painful area for six minutes. We did this three times that week and the following week, I asked him how he felt. He responded, “I’m still getting a little twinge now and then.” He reported that there was no blood in his urine and he had started taking a tablespoon of apple cider vinegar

every day. I gave him another six minute treatment that Monday and another one on Wednesday. Since then he has been cheerful and happy and free of any pain. Joanne Johnson, Aspen, CO

I have been using the QLaser for **neck pain** due to bone loss in C5, C6, T1. Prior to using the laser, I had chronic pain exacerbated when fatigued. My Qi Gong helped ease the pain, but it was always there. Regular use of the laser has resulted in NO pain! Also, I have a friend who was in a serious automobile accident with **massive pain in her neck and back**, especially after wearing a neck brace. After 5 weeks of QLaser therapy, her pain has been 100% eliminated and her surgeon believes her bones are healing faster due to the laser use. Roberta Roth, Eugene, OR

“It helped my **Knee** a lot. Also My sons shingles, his shoulders, and arm.” Ann K –Altamonte Springs, FL

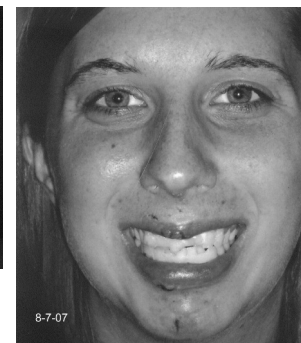

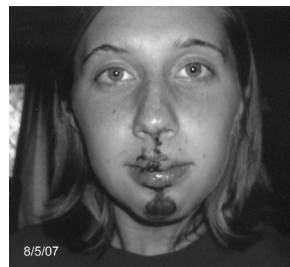

My wife tripped and damaged her **rotator cuff**. We used the Q1000 and she completely healed up in only 12 days. Vern Benson, Manhattan Beach, CA

I had two **cavities**, one small, one larger ... and have been treating them two times per week for the last six months (following the protocol in Dr. Lytle's *Laser Users Manual*. The smaller cavity has completely disappeared and larger one is healing. Holly Danneman, Alpine, UT

Pagets Disease (Skin Cancer of the Vulva). Since undergoing a vulvectomy I have had constant nerve pain to the vulva and inner thigh. Despite repeated requests for a solution my Consultant was unable to offer any treatment apart from painkillers, which did not help at all. I used the Q1000 and found that one of the worst aspects of the nerve pain, a constant feeling which felt similar to an electric shock, has been 99% removed by QLaser therapy. A really amazing result! I would advise any one with ongoing **nerve pain** to try laser light therapy as it has cer-

tainly helped me. Mary Davies, age 55

I have used my Q1000 on my **prostrate** with tremendous success ... no dribbling, and I don't have to get up in the night any longer to urinate. My friend (Dale Ames) also bought a Q1000 for his prostate problems and said this was the best investment he's ever made. I have also has had tremendous success with pain in my shoulder. Before the Q1000, I couldn't sleep on it and now I can. Lester Fluth, Cambridge, MN

On 8/2/07 this 23 year-old took a swan dive down some cement stairs. I worked 3.5 hours straightening, suturing and bonding her teeth back into place. I think the pictures from 8/5/07 to 8/7/07 speak for themselves! Dr. John Fite, DDS, Longview, TX

Referralmania!

To Be An Ongoing Feature of QLaser Solutions

Referralmania! is your chance to help your friends and family learn more about the benefits of QLaser therapy ... and to receive recognition and rewards as the #1 “referralmaniac” of the month. Everyone who plays gets a free PDF copy of two of Dr. Lytle's books ... and, **if you are the months #1 referralmaniac ... you also get a \$25 QLaser Solutions gift certificate!** It's easy to play. Just email me (kip@rapidnet.com) your personal testimonial and a minimum of five (5) referrals (I only need their name and email address) to me by the 20th of the month. Winners are announced in the next months newsletter.
